STATISTICS OF INCOME.

Compiled from the Returns for 1916.

TREASURY DEPARTMENT,
OFFICE OF COMMISSIONER OF INTERNAL REVENUE,
Washington, D. C., June 1, 1918.

Hon. W. G. McADOO,
Secretary of the Treasury.

SIR: I have the honor to submit herewith for publication a report entitled "Statistics of Income" as compiled from the returns of personal and corporate income filed with the Treasury Department for the year ended December 31, 1916. This publication is in compliance with section 21 of the act of Congress approved September 8, 1916, which provides:

That the preparation and publication of statistics reasonably available with respect to the operation of the income-tax law and containing classifications of taxpayers and of income, the amounts allowed as deductions and exemptions, and any other facts deemed pertinent and valuable shall be made annually by the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury.

PERSONAL INCOME-TAX RETURNS.

In the calendar year ended December 31, 1916, personal returns in the number of 437,036 were filed, showing an aggregate net income of \$6,298,577,620, income tax (normal and additional) amounting to \$173,386,694, an average tax of \$396.73 and an average tax rate of 2.75 per cent of the aggregate net income.

INCOME CLASS DISTRIBUTION (PERSONAL RETURNS).

These returns may be surveyed from the standpoint of class distribution, occupational distribution, returns by States, and source, i. e., whether derived from personal service or property. The following table classifies or distributes the number of returns filed, the net income returned, and the total tax shown, according to the size of the income or the amount returned.

Cumulative percentage of personal returns by income classes—Extract from Table 2.

Income classes.	Cumulative percentage of returns filed.	Cumulative percentage of net income returned.	Cumulative percentage of tax, normal and additional.
\$3,000 to \$10,000.....	71.659	26.385	4.081
\$3,000 to \$25,000.....	90.495	45.992	10.793
\$3,000 to \$30,000.....	92.371	49.500	12.334
\$3,000 to \$90,000.....	98.206	68.903	25.244
\$3,000 to \$100,000.....	98.456	70.528	26.885
\$3,000 to \$150,000.....	99.131	76.202	34.050
\$3,000 to \$300,000.....	99.698	84.233	47.896
\$3,000 to \$500,000.....	99.864	88.551	58.250
\$3,000 to \$2,000,000.....	99.985	95.626	81.138
\$3,000 to \$5,000,000.....	99.998	98.367	92.344
\$3,000 to \$5,000,000 and over.....	100.00	100.00	100.00

From the preceding table it appears that more than one-fourth (26.38 per cent) of the total net income reported was returned by persons with incomes of from \$3,000 to \$10,000, nearly one-half (49.5 per cent) by those with incomes of from \$3,000 to \$30,000, and more than three-fourths (76.2 per cent) by those with incomes of less than \$150,000. While 98.5 per cent of the total number of returns filed represented incomes of less than \$100,000, the 1½ per cent, representing incomes of \$100,000 or more, reported nearly one-third of the total net income and nearly three-fourths of the total tax.

EXEMPTIONS FROM NORMAL TAX (PERSONAL RETURNS).

While the total net income reported in the personal returns amounted in the year 1916 to \$6,298,577,620, only about 40 per cent of this amount was subject to the normal tax. Specific exemptions of \$3,000 and \$4,000 were allowed to single and married persons or heads of families, respectively, and 25 per cent of the total net income was exempted under this head. Dividends, moreover, were not subject to the normal tax, and in 1916 dividends represented 33.92 per cent of the total net income returned.

CLASSIFICATION BY SEX AND CONJUGAL CONDITION (PERSONAL RETURNS).

It is not possible to classify taxpayers accurately by sex and conjugal conditions, owing to the fact that 81.25 per cent of the returns are made by heads of families including joint returns of husband and wife. However, it is possible to show separately the returns made by married women and to classify by sex the taxpayers who were not heads of families. The significant facts in this connection which it is possible to derive from the returns are set forth in the two summary tables immediately following:

DISTRIBUTION OF INCOMES BY OCCUPATION (PERSONAL RETURNS).

The following table shows for 22 selected occupations, what proportion of the persons engaged in such occupations made returns in 1916. The occupations selected for this comparison are those in which a relatively small proportion of minors are employed.

SERVICE, BUSINESS, AND PROPERTY AS SOURCES OF INCOME (PERSONAL RETURNS).

It has been possible to measure in a rough way the relative importance of incomes derived, respectively, from personal service, business, and property. Under personal service have been classified incomes and salaries, professions and vocations. Partnership gains and profits of all kinds have been included in the class devoted to business pursuits. On the other hand, rents, royalties, interest income reported by fiduciaries, income from foreign sources, and dividends have been classified as "income from property." The

comparisons have been based upon gross income, inasmuch as it is not possible accurately to allocate the various deductions to their correct places in such a classification.

Comparison of incomes from personal service, business, and property—Summary of Table 7.

Distribution.	Gross income.	Per cent of total gross income.
Income from personal service:

Income from business:		
Business, trade, commerce, and partnership gains and profits.....	2,637,474,520	31.59
Total income from personal service and business.....	4,488,751,296	53.76
Income from property:

Less general deductions.....	2,051,324,363	24.57
Total net income.....	6,298,577,620	75.43

From the above table it appears that more than one-half of the gross income in 1916 was derived from service and business. If it had been possible to classify the deductions, a different proportion might have been obtained for net income. However, it is probable that even if the deductions could be taken into account, income from service and business would not be markedly different in importance from property income as that term has been here interpreted. The outstanding feature of the table is found in the great importance of salaries, dividends, and business profits. These three classes account for practically three-fourths of the gross income returned.

INCOMES FROM PERSONAL SERVICE AND BUSINESS, AND FROM PROPERTY BY INCOME CLASSES (PERSONAL RETURNS).

In the following table the relations to the gross income of income from service and business, income from property, general deductions, and total net income, are separately shown for each income class. It will be noted that the proportion of property income steadily rises as the income itself becomes larger. It will also be noted that the deductions are relatively greater in the smaller incomes than in the larger incomes. In the highest group containing incomes of \$2,000,000 and over, nearly 92 per cent of the gross income was subjected to tax, the deductions representing only a little more than 8 per cent of the gross amount returned.

TAX WITHHELD AT SOURCE (PERSONAL RETURNS).

Figures showing the amount and importance of the tax withheld at source by banks and other withholding agents, under the provisions of the law of September 8, 1916, are shown in Table 8. The withholding requirement affected only the normal tax. The total tax withheld at the source was \$8,904,572. This constituted 17.31 per cent of the normal tax (\$51,440,558) and 5.14 per cent of the total tax, normal and additional, amounting to \$173,386,694.

CORPORATE INCOME-TAX RETURNS.

The immediately following tables are based upon the returns of corporations of which there were filed 341,253, showing gross income of \$35,327,631,015, net income of \$8,765,908,984, and a total income tax of \$171,805,150.

GROSS INCOME, NET INCOME, AND TAX. (CORPORATE RETURNS.)

Of the total number of returns filed only 206,984, or 60.65 per cent, reported a positive net income. The remainder, numbering 134,269, or 39.35 per cent of the total, reported no net income, and of this group 41,174, or more than 12.07 per cent, were returned as "inactive or out of business." These features of corporation returns are summarized in the following table:

DISTRIBUTION OF CORPORATE INCOMES BY INDUSTRIES.

Financial results of corporate activities in the various industries in the United States, as reflected by net income, comprise the next phase of the subject under consideration. In this connection there is presented below in condensed form a table showing the total corporate incomes for the United States for 1916, distributed according to industries under the following groupings: Agriculture, mining, manufacturing, public utilities, banking and insurance, merchandising, and miscellaneous corporations. In this table is shown the number of corporations making returns and the corresponding incomes classified as to those showing net income and those showing no net income. The summary is based on Table 10.

The outstanding feature of the above table is the prominence of the manufacturing and mechanical industries. Out of 341,253 separate corporate returns made in 1916, there were 80,176 classed as manufacturing and mechanical corporations, making 23.49 per cent of the total. Among corporations showing net income the manufacturing and mechanical comprised 26.97 per cent of the entire group, and they were charged with 47.30 per cent of the entire tax assessed against corporations.

The next in importance to manufacturing is the group of public utilities which report a net income of \$1,541,076,130 and a normal tax of \$30,160,766. The percentage of corporations in these classes showing net income is nearly identical, being 69.63 per cent for the manufacturing and mechanical industries and 68.97 per cent for public utilities.

Leaving out of account the miscellaneous companies, the third group of industries in importance so far as net income and normal tax are concerned, is that concerned with the extraction of minerals. Of these corporations, 45.06 per cent show net income, and 54.94 per cent record a deficit.

INCOME RETURNS BY STATES.

COMBINED PERSONAL AND CORPORATE INCOME.

The following table shows the net income and tax reported in the returns by States. The figures do not represent, however, what may be called the geographical distribution of income. They are based upon the returns filed in each State. An individual files his income-tax return in the State in which he resides and a corporation files its income-tax return in the State in which its principal place of business is located. Consequently income reported by an individual or corporation in one State may have been derived from sources in other States. Furthermore, under the provision for the collection of tax at the source the collecting agent filed the return in the State in which the agent was located, regardless of the residence of the person earning the income.

From the foregoing it will be clear that there is no way of ascertaining from the income-tax returns the amount of income earned in the respective States or the amount of tax paid on that basis.

FOREIGN INVESTMENTS IN THE UNITED STATES.

The returns of nonresident aliens and also of corporations controlled by nonresident aliens are separately tabulated in Table 11. The personal income tax returns numbered 4,294, with a total net income of \$65,772,271 and a total tax liability, normal and additional, of \$1,656,418. The net income of foreign corporations reporting net income was \$81,814,841 and the deficit reported by foreign corporations having no net income was \$2,568,446. For nonresident aliens and foreign corporations the total net income was \$147,587,112, with a corresponding tax of \$3,189,307. These figures relating to nonresident aliens and foreign corporations are embraced in the various tables under the proper headings and are included in the total income and tax for the United States.

HISTORICAL GROWTH OF INCOME ADMINISTRATION.

The present system of income taxation began with an excise tax with respect to the income of corporations, incorporated as section 38 of the tariff act of August 5, 1909. That statute continued as an

excise provision until it was superseded by the income-tax law of October 3, 1913. This latter statute, as well as the subsequent act of September 8, 1916, embraced both personal and corporate incomes as sources of Federal revenue.

According to the comparative yearly returns of net income, there has been a more or less steady growth in the income returned by corporations, with exceptional increases in the amounts reported for 1915 and 1916. From the inception of the original excise statute of 1909 to the income act of 1916 the net income reported by corporations rose from \$3,590,000,000 to \$8,765,900,000.

The personal income tax history covers a shorter period. In the four years from 1913 to 1916, inclusive, the net income advanced from \$3,900,000,000 to \$6,300,000,000. The data in which these various phases of growth are summarized are brought together in statistical form in the following tables. Comparison by income classes for the personal income returns is confined to the three calendar years 1914, 1915, and 1916. The returns for 1913 are omitted as they pertain only to the last ten months of that year and do not coincide with the classification used in the three subsequent years.

¹ Returns showing net income in excess of \$5,000 exemption.

² Decrease.

³ 1915 contains approximately 30,000 returns showing no net income which properly belong and should be included in 1914. (See Annual Report, Commissioner of Internal Revenue, 1916, p. 26.)

The net income for corporations, as shown in the above table includes not only the sum of incomes returned by corporations upon the prescribed forms, but also such additional income as was uncovered by field investigation or other revision of original returns. This accounts for the slightly larger aggregate of net income by years than is shown elsewhere in unrevised totals of earlier date.

Comparison from year to year of the returns showing net income with those showing no net income, shows a steady increase in the number of corporations reporting taxable income. At the same time there has been a slow but steady increase in the total number of corporations making returns. The basic statistical tables supporting this analysis immediately follow.

Respectfully,

DANIEL C. ROPER,
Commissioner of Internal Revenue.

Approved:

Secretary of the Treasury.
